CONTENTS

LIST OF EXPERIMENTS

	Page No.
Preface	i
Acknowledgments	iii
Contents	v
 Part-I: HEAT TRANSFER OPERATIONS	
1. Friction through Pipes and Fittings	1
2. Flow through Packed Beds	5
3. Flow through Fluidized Beds	9
4. Diffusivity of Acetone in Air	15
5. Packed Bed Absorption Column	19
6. Helical Coil Heat Exchanger	25
7. Shell-and-Tube Heat Exchanger	31
8. Double-Pipe Heat Exchanger	37
9. Heat Transfer in Boiling Kettle	47
10. Mass Transfer with Chemical Reaction	51
 Part-II: SELECTED CHEMICAL ENGINEERING OPERATIONS	
1. Rotary Drum Filter	55
2. Plate-and-Frame Filter Press	59
3. Cross-Circulation Drying	63
4. Crushing and Grinding	67
5. Froth Floatation	73
6. Basket Centrifuge	77
7. Centrifugal Double-Cone Classifier	81
8. Sedimentation	85
9. Centrifugal Pump Characteristics	89
10. Double Acting Reciprocating Pump Characteristics	97

Part-III: PROCESS CONTROL

1. Identification of Plate Type Heat Exchanger	101
2. Temperature Control by Microprocessor based PID Controller	107
3. Liquid Level Control by Microprocessor based PID Controller	109
4. Pressure Control by Microprocessor based PID Controller	113
5. Flow Rate Control using Microprocessor based PID Controller	115
6. Flow Rate Control using Multiprocess Trainer	119
7. Level Control using Multiprocess Trainer	123
8. Temperature Control using Multiprocess Trainer	127
9. Temperature Control of a Liquid Vessel	131
10. Level Control of a Liquid Vessel	135
11. pH Control using a Conventional PID Controller	137
12. Identification of pH System	141
13. Level Control using Process Module 9	143
14. Temperature Control using Process Module 13	147
15. Pressure Control using Process Module 14	149
16. Level Control using Process Module 9	153
17. Pressure Control using Process Module 14	155
18. Pressure Control using Multiprocess Trainer	157
19. Flow Control using Process Module 9	159
20. Cascade control of Temperature using Multiprocess Trainer	161
