
CONTENTS

	Preface	xi
1	Introduction	1
1.1.	Process Synthesis	3
1.2.	Process Analysis	5
1.3.	Optimization	7
1.4.	Process Plant Simulation	10
1.5.	Organization of the Text	10
	Problems	11
Part I	Modeling	13
<hr/>		
2	Modeling Aspects	15
2.1.	Deterministic vs. Stochastic Processes	15
	2.1.1. Deterministic Process	15
	2.1.2. Stochastic Process	16
2.2.	Physical Modeling	16
2.3.	Mathematical Modeling	16
2.4.	Chemical Systems Modeling	19
	2.4.1. Model Formulation Principles	20
	2.4.2. Fundamental Laws used in Modeling	21
	2.4.2.1. Continuity Equation	21
	2.4.2.2. Energy Equation	22
	2.4.2.3. Equation of Motion	22
	2.4.2.4. Transport Equations	23
	2.4.2.5. Equations of State	23
	2.4.2.6. Equilibrium Relations	25
	2.4.2.7. Chemical Kinetics	28
2.5.	Cybernetics	30
2.6.	Controlled System	30
2.7.	Principles of Similarity	31
	2.7.1 Geometric Similarity	31
	2.7.2 Kinematic Similarity	31
	2.7.3 Dynamic Similarity	32

	2.7.3.1. Model Example	32
	2.7.3.2. Numerical Example-1	35
	2.7.3.3. Numerical Example-2	36
	Problems	37
3	Classification of Mathematical Modeling	39
3.1.	Classification based on Variation of independent variables	39
	3.1.1. Distributed Parameter Models	39
	3.1.2. Lumped Parameter Models	39
3.2.	Classification based on State of the Process	40
	3.2.1. Static Model	40
	3.2.2. Dynamic Model	41
	3.2.3. The Complete Mathematical Model	41
3.3.	Classification based on Type of the Process	43
	3.3.1. Rigid Models	43
	3.3.2. Probabilistic Models	43
	3.3.3. Comparison between Rigid and Probabilistic Models	43
3.4.	The Black Box Principle	45
3.5.	Artificial Neural Networks (ANN)	45
	3.5.1. Network Training	48
3.6.	Independent & Dependent Variables, and Parameters	49
	3.6.1. Independent Variables	49
	3.6.2. Dependent Variables	49
	3.6.3. Parameters	49
	3.6.4. Unsteady-state Single Stage Extraction: an Example	50
3.7.	Boundary Conditions	51
	Problems	52
Part II	Chemical Systems Modeling	53
4	Models in Mass Transfer Operations	55
4.1.	Steady-State Single-Stage Solvent Extraction	55
4.2.	Steady-State Two-Stage Solvent Extraction	59
4.3.	Steady-State Two-Stage Cross-Current Solvent Extraction	63
4.4.	Unsteady-State Single-Stage Solvent Extraction	66
4.5.	Unsteady-State Mass Transfer in a Stirred Tank	70
4.6.	Unsteady-State Mass Transfer in a Mixing Tank	73
4.7.	Unsteady-State Mass Transfer (Fick's II Law of Diffusion)	76
4.8.	Steady-State N-Stage Counter-Current Solvent Extraction	79
4.9.	Multi-Stage Gas Absorption (Kremser-Brown Equation)	83
4.10.	Multi-Stage Distillation	87
	Problems	91
5	Models in Heat Transfer Operations	95
5.1.	Steady-State Heat Conduction through a Hollow Cylindrical Pipe	96

5.2.	Unsteady-State Steam Heating of a Liquid	101
5.3.	Unsteady-State Heat Loss through a Maturing Tank	103
5.4.	Counter-Current Cooling of Tanks	109
5.5.	Heat Transfer through Extended Surfaces (Spine Fin)	114
5.6.	Temperature Distribution in a Transverse Cooling Fin of Triangular Cross-Section	120
5.7.	Unsteady-State Heat Transfer in Tubular Gas Preheater	122
5.8.	Heat Loss through Pipe Flanges	124
5.9.	Heat Transfer in a Thermometer System	126
5.10.	Unsteady-State Heat Transfer by Conduction	128
	Problems	131
6	Models in Fluid Flow Operations	135
6.1.	The Continuity Equation	135
6.2.	Flow through a Packed Bed Column	138
	Problems	139
7	Models in Reaction Engineering	143
7.1.	Chemical Reaction with Diffusion in a Tubular Reactor	143
7.2.	Chemical Reaction with Heat Transfer in a Packed Bed Reactor	146
7.3.	Gas Absorption accompanied by Chemical Reaction	152
7.4.	Reactors in Series – 1	154
7.5.	Reactors in Series – 2	158
	Problems	160
Part III	Treatment of Experimental Results	163
8	Error Propagation and Data Regression	165
8.1.	Propagation of Errors	165
	8.1.1. Propagation through Addition	165
	8.1.2. Propagation through Subtraction	166
	8.1.3. Propagation through Multiplication & Division	166
8.2.	Sources of Errors	167
	8.2.1. Errors of Measurement	167
	8.2.2. Precision Errors	167
	8.2.3. Errors of Method	167
	8.2.4. Significant Figure	167
8.3.	Data Regression	167
	8.3.1. Theoretical Properties	168
	8.3.1.1. The Origin	168
	8.3.1.2. Starting Gradient	168
	8.3.1.3. Efficiencies	168
	8.3.2. Data Regression Methods	168
	8.3.2.1. Graphical Method	169
	8.3.2.2. Analytical Methods	170

8.3.2.2.1. Method of Averages	170
8.3.2.2.2. Method of Least Squares	172
8.3.3. Problems on Data Regression	173
Problems	178

Part IV Optimization 181

9 Traditional Optimization Techniques	183
9.1. Limitations of Optimization	183
9.2. Applications of Optimization	184
9.3. Types of Optimization	186
9.3.1. Static Optimization	186
9.3.2. Dynamic Optimization	186
9.4. Methods of Optimization	187
9.4.1. Analytical Methods of Optimization	188
9.4.1.1. Problems involving 2 variables	188
9.4.1.2. Problems involving 3 variables	188
9.4.1.3. Problems involving 4 variables	189
9.4.1.4. Problems involving n independent variables	189
9.4.2. Optimization with Constraints (Lagrange Multipliers)	190
9.4.2.1. Problem on Lagrangian Multiplier	192
9.4.3. Gradient Methods of Optimization	193
9.4.3.1. Methodical Procedure for Optimization	195
9.4.3.2. The Method of Steepest Descent (Ascent)	195
9.4.3.3. The Demerits of Steepest Descent Method	199
9.4.3.4. Method of Steepest Descent (Ascent) with Constraints	199
9.4.3.5. Problems on Method of Steepest Descent	199
9.4.3.6. The Sequential Simplex Method	204
9.4.3.7. Advantages of Sequential Simplex Method	206
9.4.3.8. Reflection, Contraction, and Expansion	206
9.4.3.9. Flow Diagram for Sequential Simplex Method	209
9.4.3.10. Problems on Sequential Simplex Method	210
9.4.4. Rosenbrock Method	214
9.4.5. Other Methods	214
9.4.5.1. Golden Section Search	214
9.4.5.2. Brent's Method	215
9.4.5.3. Quasi-Newton Methods	215
9.4.5.4. Direction Set Methods	216
9.4.5.5. Linear Programming	216
Problems	217
10 Non-Traditional Optimization Techniques	221
10.1. Simulated Annealing (SA)	222
10.1.1. Introduction	222

Problems	259
12 Decomposition of Networks	263
12.1. Tearing Algorithms	263
12.2. Algorithms based on Signal Flow Graph	263
12.2.1. The B&M Algorithm	265
12.2.2. The Basic Tearing Algorithm	266
12.3. Algorithms based on Reduced Digraph	267
12.3.1. The K&S Algorithm	267
12.3.2. The M&H-1 Algorithm	268
12.3.3. The M&H-2 Algorithm	269
12.3.3.1. The M&H-2 Algorithm (Schemes I & II)	270
Problems	271
13 Convergence Promotion and Physical & Thermodynamic Properties	275
13.1. Convergence Promotion	275
13.1.1. Newton's Method	276
13.1.2. Direct Substitution	276
13.1.3. Wegstein's Method	276
13.1.4. Dominant Eigenvalue Method (DEM)	277
13.1.5. General Dominant Eigenvalue Method (GDEM)	277
13.1.6. Quasi-Newton Methods	278
13.1.7. Criterion for Acceleration	278
13.2. Physical & Thermodynamic Properties	279
13.2.1. Sources	280
13.2.2. Data Banks	281
13.2.3. Modularity and Routing	283
Problems	285
14 Specific Purpose Simulation and Dynamic Simulation	287
14.1. Auto-Thermal Ammonia Synthesis Reactor	287
14.1.1. Ammonia Synthesis Reactor	287
14.1.2. Problem Formulation	288
14.1.2.1. Assumptions	289
14.1.2.2. Objective Function	289
14.1.2.3. Constraints	289
14.1.3. Simulated Results & Discussion	293
14.1.3.1. Temperature & Flow rate Profiles	293
14.1.3.2. Comparison of Results	294
14.1.4. Optimization	296
14.1.4.1. "Nested DE" – A new Concept	296
14.1.4.2. Effect of DE Key Parameters	297
14.1.5. Conclusions	300
14.2. Thermal Cracking Operation	300
14.2.1. Thermal Cracking	300

14.2.2.	Problem Description	301
14.2.2.1.	Objective Function	303
14.2.2.2.	Constraints	304
14.2.3.	Problem Reformulation	304
14.2.3.1.	Objective Function	304
14.2.3.2.	Constraints	304
14.2.4.	Simulated Results and Discussion	305
14.2.5.	Conclusions	306
14.3.	Design of Shell-and-Tube Heat Exchanger	306
14.3.1.	The Optimal HED Problem	307
14.3.1.1.	Generalized Design Procedure	307
14.3.2.	Problem Formulation	309
14.3.3.	Results & Discussion	310
14.3.4.	Conclusions	322
14.4.	Pyrolysis of Biomass	323
14.4.1.	Pyrolysis	323
14.4.2.	Problem Formulation	323
14.4.2.1.	Chemical Kinetics Model	324
14.4.2.2.	Heat Transfer Model	325
14.4.3.	Method of Solution & Simulation	325
14.4.4.	Results & Discussion	326
14.4.4.1.	Non-isothermal Conditions	326
14.4.4.2.	Isothermal Conditions	331
14.4.4.3.	Experimental Validation and Comparison	334
14.4.4.4.	Convective Heat Transfer Coefficient	337
14.4.5.	Conclusions	339
14.5.	HYSIS – A Professional Software Package	341
14.5.1.	Integrated Simulation Environment	341
14.5.2.	HYSIS Products	342
14.5.2.1.	HYSIS.Process	342
14.5.2.2.	HYSIS.Plant	342
14.5.2.3.	HYSIS.Refinery	342
14.5.2.4.	HYSIS.OTS	342
14.5.2.5.	HYSIS.RTO	342
14.5.2.6.	HYSIS.Concept	343
14.5.3.	Intuitive and Interactive Process Modeling	343
14.5.4.	Open and Extensible HYSIS Architecture	343
14.6.	FLUENT – A Software Package for CFD	344
14.6.1.	Structure of the Program	344
14.6.2.	Capabilities of FLUENT	346
14.6.3.	Using FLUENT – An Overview	347
14.6.4.	Physical Models in FLUENT	347
	Problems	348
